STEP-BY-STEP ILLUSTRATED GUIDE

Build an Android APK (Debug Mode) using Expo + EAS in Visual Studio Code

1. Install Node.js

Check installation:

node -v

npm -v

2. Install Git

3. Install Expo CLI:

npm install -g expo-cli

4. Install EAS CLI:

npm install -g eas-cli

5. Open your project in Visual Studio Code:

File → Open Folder

6. Open Terminal in VS Code:

Ctrl + ` or View → Terminal

7. Install project dependencies:

npm install

8. Run project locally:

npx expo start

9. Login to Expo:

eas login

10. Configure EAS:

eas build:configure

11. Build Android APK (Debug Mode):

eas build --platform android --profile development

12. Monitor Build:

Visit the link shown in terminal.

13. Download APK:

From EAS Build Dashboard.

14. Install APK on Android:

Enable “Install unknown apps”

Tap APK → Install → Open
